

Art.-No.: 6.8075.1000

8075

Anti-hologram Compound

Characteristics

8075 is the latest generation machine polish for the permanent removal of streaks, holograms, fine scratches and sanding marks to P3 000 grain size on all paint systems (including scratch-resistant). Through the use of highly specialised, extremely homogenous abrasives, a brilliant permanent high gloss finish is created under extreme light conditions even on dark and similarly sensitive shades. Holograms and fine scratches are eliminated mechanically and not, which is often the case, covered over. 8075 is extremely economical, easy to polish and removable without leaving traces. Silicone-free.

Application

Shake before using.

For optimum results we recommend using our medium firm green polishing pads (8271 / 8281) to remove holograms or our soft blue polishing pads (8272 / 8282) to remove micro scratches. Before use, moisten dried or new pads completely with polish. With the machine switched off, apply the polish evenly over the surface to be treated and then polish crosswise with medium pressure until a transparent film appears, i.e. until the aluminium oxide in the polish has completely broken down. Do not use pads used with this product for other products. For non-scratch and groove-free removal of polish residues we recommend our non-chainstitched microfibre cloth 4CR 6255.

Do not use on hot surfaces. Before using, check suitability and compatibility.

Areas of use

Paintwork of cars, commercial vehicles, motor cycles, etc.

Technical Data

Colour	grey
Bottle	HDPE, 500 ml

Storage and Transportation

Keep dry and frost-protected. In tightly closed original containers at least 2 years shelf life.
